SOLAR FLUX HAS BEEN ON THE RISE again, but it looks as if it will peak before the CQ CW Contest Nov 23. KH6BZF REPORTS predicts that flux will peak around Nov. 17 or 18, and that the peak will not be in the mid-90s as it was a few days before the CQ Phone Contest.

The ARRL 10 Meter Contest (Dec 14/15) could benefit from this pattern, if it persists. During the ARRL Phone Swepstakes last weekend 15 and 10 were active with what was apparently sporadic E skip, much stronger than is normal for this time of year. It may be possible to work DX during the CQ CW Contest on multi-hop E propagation rather than F Layer.

P29JS reports working 21 countries and 10 zones on 10 Meters during the CQ Phone Contest, so it seems the good conditions were worldwide. Jim had excellent openings to Europe on 15, too.

• SOME LAST MINUTE additions to the list of contest/expedition stations scheduled for the CQ Contest:

OH2BBM will replace OH2BEN in the Gambia, and sign OH0XX/C56 on 160-10; QSLs to OH2BBM.

OH2BAZ will operate from the Aland Islands as OH0BA, using the OH0W contest station. There are some new stacked beams there, and Vili's club, the OH-DX-RING, notes that Vili will be trying for the top European score from a notoriously poor DX location.

Pasi, OH6UM, will work single-band 20 Meters from OH8OS, using the well-known aerial array there. It's (8) KLM 6-element yagis on a 180-foot rotating pole.

Brothers Brook K4TKM and Ken K4TEA Byers will operate multi-single from KH6DW; the Colvins, of course, will be active as W6QL/ZS3 before moving to their next African spot. There is a rumor that AD1S will operate from Belau in the West Carolines as KC6WS.

Finally, N6AA is reportedly headed for Cueta, EA9AM, N6ZZ will activate XE2MX, and Dutch Sint Maarten (PJ8 or perhaps P48) will be operated by W6GC, K6KH, and W6MI. They will follow that with Antigua Nov 27 to Dec 3, and also possibly Anguilla and French Saint Martin.

• The Colvins report making about 6,500 contacts in 143 countries as W6KG/ZS, including the CQ Phone Contest. They operated from the club station site of the South Africa Radio League in Johannesburg. Much of their time in S. Africa was spent making perparations to operate from other African countries, where licensing and accommodations aren't so convenient.

• There isn't much news on Cambodia in the press these days, but it is apparent that XU1SS has been active little if any in the past year or so. The Associated Press reported Nov 11 that Cambodian Communist guerillas and some Vietnamese soldiers had been evicted from Eastern Thailand. The guerillas had chased the Vietnamese over the border into Thailand. All this is taking place in precisely the area where XU1SS is (was) located, at the Ampil Camp.

• VK0CC (VK2BCC) may still be on Heard Island ... they are having problems getting away on schedule. Few if any have worked him, but Jim Smith P29JS/VK9NS and wife Kirsti VK9NL both did. Jim and Kirsti both needed Heard Island, since they were on the island during the 1983 simultaneous operations.

• 160 Meter beacon DHJ, which had been off the air for some time, is back on, on 1830.5, out of West Germany. OSN (Belgium) is on 1831, and ZA01 is on 1837 from Albania. Regulars on the band know that often these beacons can be loud when DX is otherwise down, and vice-versa. Maybe if you can't hear them it would be a good time to call some CQs.

• The Clipperton FO0XX operators say they expect all QSL requests to have been answered by the end of November. They request that you do not send duplicate requests. Over 14,000 QSLs have already been sent out.

• We heard VR6JR on Nov 16 on 15 Meters, so he is still there on Pitcairn, surprisingly. But there haven't been any other reports on him for some time.

• CQ magazine for December (page 10) solicits nominations for their DX Hall of Fame. This is the first time we can recall that they have publicly asked for nominations. They say "Nominees to the DX Hall of Fame should have made major contributions to DX over a period of several years, at no personal gain to themselves, and often at great sacrifice."

These must be new criteria for the Hall of Fame, because it would appear that a number of people already in the Hall do not meet these requirements. You can send your nominations to K4IIF.

## OPERATION FROM ZAIRE, 9Q5MA

by GERBEN MENTING, PA0GAM*

I DECIDED to plan an operation for October, 1985, my first operation of this year. In view of propagation, Central Africa is a good place for an expedition, and 9Q5 is quite rare on CW.

After some last minute work (I got my visa just one day before departure!), I traveled to Brussels by train on Oct 1. I left Belgium on an Air Zaire DC-10 and landed the next day at 0540 local time (the same time as in Belgium).

Julien, 9Q5MA, took me from the airport and together we went to the center of Kinshasa for a cool drink. After Julien had done the shopping for the coming two weeks, we started our trip to Julien's QTH, Matadi, 350 kM southwest of Kinshasa. After dinner, we went to the radio/sleeping room, where Julien showed me his station. I connected the keyer and made the first QSO at 2050Z on 14 MHz with my buddy PA0GIN, who kept my family informed throughout my stay.

After spending some hours at the rig, I went to bed, tired after two days of traveling. The next day, I replaced the existing dipoles with a windom antenna, so I would have only one feedline for 5 bands. The windom was hanging only about 10 meters above ground, but the location is on the slope of a hill, and that's probably why the signal was so good on all bands.

Julien's house overlooks a long narrow valley, to the north. Fortunately, the USA, Europe and Japan all lie in a rather small angle, about the shape of the valley. That made it easy to work those parts of the world but very difficult to get into VK and ZL.

80 Meters turned out to be nearly impossible to work, because of the high noise levels. I only worked about 240 stations on 80. 40 Meters was also noisy, but not for such long periods of time. There was some TVI in the house, which limited 40 Meter operating, but I did work 150 JA, 690 W, and 500 Europeans, out of a 40 Meter total of 1380.

20 Meters produced 4,100 contacts, 15 was good for 1,100, mostly Europe, and on 10 Meters I made 37 contacts, 35 of them Europeans. I tried 10 Meters about 1000 and 1100Z, but after returning home I learned from the DJ9ON/S9 operation that the real openings were around 1500Z.

I made 7,000 contacts total, all CW; although there is a difference in working JAs, Ws, and Europeans, I would like to say that the Europeans did really fine, especially those in countries that have a bad name in the SSB pile-ups.

I enjoyed the fantastic hospitality of Julien and his XYL. Their good cooking an care kept me in good condition, which enabled me to spend so many hours in the shack.

Hope to meet you again from another place.

---

* PA0GAM is editor of DXPRESS, a publication of VERON, the Dutch national amateur radio society. This article first appeared in that publication.

MIKE SMEDAL, A71AD, leaves Qatar around the end of December; he will dismantle the station the first week of Dec. Mike, pictured above with his daughter, says that he must surrender his 6 years' worth of log books to the licensing authority when he leaves. As there is no QSL bureau in Qatar, you MUST QSL to Mike NOW if you ever want an A71AD (or A7XD) card. Send to C.G. Mike Smedal, PO Box 4747, Doha, State of Qatar, Middle East.

In his 6 years there, Mike has made 52,000 contacts, including 5-Band DXCC, 5-band WAZ, and 304 confirmed for DXCC.
